

## Case Study: JACK

My name is Jack. I'm in S4 and I'm currently doing a placement for Wallace McDowall. This is preparing me for jobs in the engineering field.

One thing I find great about the workplace here has to be the friendly work environment. The employees here were always open to discussion. Communication and safety are very key here, they even allowed me to design, program, and cut my own personalised design.

I've also learned how to act and speak professionally during a workplace environment. This experience will give me an edge for any future employment, alongside this I also learned how to read engineer drawings and properly check finished products. While here I was taught how to use inventor and make projected models of products.

My experience at Wallace McDowall as a whole has been an interesting enlightening work placement for me. My father has and still does work as an engineer, and I always wanted to know what it would be like. I appreciate the opportunity given to me and shall value the information I have gained over the course of my placement.

**Staff have  
commented that:**

Jack acted professionally during his time at Wallace McDowall and was very quick to pick up the CAD basics and even designed his own part.

## Work Experience Week

14th - 18th November 2022
